

SkyScape Solutions

Making your business more profitable...

February 2006 Update

News of Note!

Sharon has just been added to the speaking schedule of the AIIM Expo 2006 in Philadelphia, 16-18 May. As the UK Chair of the Workflow Management Coalition, Sharon will be speaking about using workflow within a collaborative supply network.

SkyScape Solutions is partnering with Process Competence BV in Belgium to offer a series of seminars on the SCOR model and ProVision in Late Spring 2006. Watch our website for further details. Featured speaker is Paul Schiller of BP, the Chair of the Supply Chain Council technical committee responsible for the SCOR model.

The recent Service Management magazine article on speed in logistics quotes SkyScape Solutions as a "leading consultancy" in our field. Check our website to link to the article directly.

What we are doing for our clients!

- **Business profitability improvement**

We are using a business process management approach to increase performance and reduce costs—assisted by using our TEaMS workshop methodology.

- **Business process modelling to assist in software implementations**

We have been developing detailed process models to help companies prepare for and implement new software solutions. This helps in both requirements understanding and in gap analysis.
